

Commercial Office / Warehouse Space

Location: Elstree

Code Security had the opportunity in designing and installing a CCTV, Intruder Alarm, Video Door Entry, Stand Alone Access Control & Fire Detection Systems to a 200,000sqft office and warehouse. This was completed on time and in budget.

On this project we had to factor in the clients specific requirements to ensure we had the site operational and secure before the client could take possession of the building.

This come with its challenges as we had a short time frame to complete the project for our client.

The end result was all security disciplines operational and tested before the clients dead line, which enabled our customer to take possession on time and move in as scheduled.

This site was covered with Redcare GSM with Police & Fire Brigade response to meet with insurance requirements.
