

L'Anima Café - High-End Café/Restaurant

Location: L'Anima Café, London EC2

Code Security Systems working directly with the client on one of the many projects completed at Broadgate West.

L'Anima Café well known for its great aesthetics and celebrity chef attention, this one as always had to be seamless.

Another great example of our hard work pays off!!!

The CCTV System was a key element of this project. Code Security Systems had to make sure that within the design proposal, all areas was covered.

Facial recognition was also a requirement which is why our tailor made system proved to be ideal.

Being a restaurant, the Fire Detection System is also a vital element which is why we do not only install industry standard systems, we also carry out a regular weekly test and maintenance of the system as with many other sites.

Again the Access Control System installed here not only fits in aesthetically, It helps to restrict access where required including making sure no persons can just enter the busy kitchen area !!!!!!!

Well done Code Security engineers !!!!!!!
